Project Kinloch Golf Course
 Designer Jack Nicklaus
 Contractor TIC Projects Pty
 Location: New Zealand

BunkerMat®

To create a golf course of this magnitude takes time and it takes experience.

What many people don't realise is the amount of work that goes on which is not visible. As around 80% of the work which takes place on a top golf course takes place underground. The greens and bunker construction at Kinloch are classic examples of the intense nature of this top quality Nicklaus signature build.

BunkerMat® was the chosen bunker liner at Kinloch due to its flexibility, 3 dimensional structure and its high UV stabilized fibres.

The 3 dimensional structure of **BunkerMat®** means that the sand will be incorporated into the fibres, reducing the erosive affect caused by wind and water. The high quality fibres means that **BunkerMat®** will not degrade when exposed to the elements, thus preventing further maintenance issues.
