 Client: Verve Project Management
 Consultant: Thomson Perrett
 Contractor: Turnpoint

Megaflo[®]

With the poor existing soils of the Sandhurst Golf Course, drainage was a concern for construction contractors, Turnpoint.

Andrew Purchase, Turnpoint Project Manager, trialed **Megaflo[®]** in both the greens and fairways on the Champions Course which opened to members in May 2004.

“Based on the success of the drainage on the Champions course, we have made a decision to use Megaflo[®] in all subsequent golf course construction projects that we undertake”.
 Andrew Purchase – Project Manager - Turnpoint

Megaflo[®] flat panel drainage system was also used in the Sandhurst greens.

This trenchless drainage technology is approved by the USGA. The USGA Gravel Green option was used throughout the course on the greens where the need for trenching the prepared green subgrade is eliminated.

The **Megaflo[®]** 300 is laid directly onto the prepared surface with the bidim geotextile wrapping sliced open and laid flat under the **Megaflo[®]**. Once the drainage system is fitted together with **Megaflo[®]** fittings, the area is covered with 100mm of USGA specification gravel.

I would be happy to recommend Megaflo as an alternative to the conventional way of draining green's, tee's and fairways. Andrew Purchase- Project Manager - Turnpoint
