

Case Study

Project: Victory Heights Sports City - Dubai
 Designer: Ernie Els
 Contractor: Turnpoint / Septech
 Location: Dubai

Megaflo®

Construction of this signature 18 hole championship golf course, The Dunes located in the heart of Dubai Sports City, is being undertaken by UAE-based Septech Emirates and its joint venture partner, Turnpoint Australia.

The construction phase of this project commenced in January 2007 and is due to be completed and ready for play in October 2007. Over 100 people are working on the course being involved in shaping, irrigation and landscaping.

Both construction companies, Septech and Turnpoint have utilised **Megaflo®** as their preferred material for use in the drainage of these newly created greens.

Once the base of the green has been constructed and precisely levelled, there is no need for it, then, to be excavated to install the drainage system.

This means there is no need for additional machinery usage on the green, and a limited amount of man hours is required.

Thus, leaving the greens with the shape the architect has specified in the design.
